DETAILED ACTION

1. Applicants' Response to Office Action, received 25 October 2007, is acknowledged. Claims 15, 16, 21, 33, 34, 39, 40, 45, 51, and 56 have been amended.
2. Claims 15-19, 21, 33-37, 39-49, and 51-60 are pending and under consideration.

Rejections Withdrawn

3. The rejection of claims 15-19, 21, 33-37, 39-49, and 51-60 under 35 U.S.C. 112, second paragraph, as being indefinite, is withdrawn in light of the amendment of the claims.

New Rejection Necessitated by Amendment

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Newly amended claims 15-19, 21, 33-37, 39-49, and 51-60 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As newly amended, claims 15-19, 21, 33-37, and 39 are now drawn to methods of detecting bacterial polyglutamic acid in a biological sample by detecting "a level" of soluble PGA, wherein the level of PGA is indicative bacterial infection by PGA-producing pathogens. However, 21 recites that the level detected by compared to "an average level of soluble PGA in blood samples from humans who have not been infected by said PGA-producing pathogen".

As newly amended, claims 40-49 and 51-60, are now drawn to methods of detecting infection by a PGA-producing bacterium, or of evaluating the progression of said infection by detecting "a level" of soluble PGA.

However, 21 recites that the level detected by comparing the detected soluble PGA to "an average level of soluble PGA in blood samples from humans who have not been infected by said PGA-producing pathogen".

Thus, it is unclear how the detection of "a level" of PGA is indicative of bacterial infections or progression if there is already present "an average level of soluble PGA in blood samples from humans who have not been infected by said PGA-producing pathogen".

Conclusion

6. No claims are allowed.

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
